

MedAdhere

Medication Adherence Tracking System

Project Report - May 2026

Team Information

- ☒ Project Lead: Development Team
- ☒ Version: 1.0.0+1
- ☒ Framework: Flutter 3.9.2
- ☒ Supported Platforms: Android, iOS, Windows, Web, Linux, macOS
- ☒ Supported Languages: English, Zulu, Xhosa

2. Problem Statement & Target Users

Problem Statement

Medication non-adherence is a critical healthcare challenge in Southern Africa, particularly for chronic conditions. Patients struggle to remember medication schedules, leading to poor health outcomes and increased hospitalizations. Healthcare workers lack real-time visibility into patient adherence patterns, making it difficult to intervene early.

Target Users

1. Patients: Individuals managing chronic conditions (diabetes, hypertension, etc.)
2. Healthcare Workers: Clinic staff and community health workers
3. Caregivers: Family members supporting patient medication adherence
4. Geographic Focus: Southern Africa (primary), with multi-language support

3. Implemented Features

Patient Features (✅ Implemented)

- ✅ Home Dashboard: View upcoming medications and adherence status at a glance
- ✅ Medication Tracking: Log medication intake with detailed dose information
- ✅ Adherence Calendar: Visual month-view calendar showing medication adherence history
- ✅ Risk Assessment: Real-time risk level monitoring with visual indicators (Low/Medium/High)
- ✅ Multi-Language Support: Interface available in English, Zulu, and Xhosa

Healthcare Worker Features (✅ Implemented)

- ✅ Worker Dashboard: Overview of clinic statistics and patient metrics with charts
- ✅ Patient List: Browse clinic patients with visual risk indicators
- ✅ Risk Overview: Monitor patient risk levels with visual charts and analytics
